

Special Issue on 'Mycorrhizal research now: from the micro- to the macro-scale'

Many thanks for your interest in contributing a paper to the *New Phytologist* Special Issue on **Mycorrhizal research now: from the micro- to the macro-scale**. We are very pleased to be taking this project forward with you.

I include some Author guidelines below, but should you have any questions please do not hesitate to get in touch.

We are looking forward to receiving your submissions on or before **30 June 2023**.

Many thanks,

Holly Slater

Senior Commissioning Editor, *New Phytologist* (np-managinged@lancaster.ac.uk)

Guidelines for Authors of Feature and Special Issue papers

Papers that are to be considered for *New Phytologist* Special issues or features should conform to the [full Author guidelines](#).

It is important to note that Special issue/feature papers are treated in exactly the same way as regular papers submitted to the journal (i.e. they will go through the same peer review system as regular papers and acceptance is not guaranteed). Special collection papers must therefore focus on timely research that provides new insights into the broad principles of plant science. In addressing such questions, **Research manuscripts** will focus entirely on the presentation of new data (mixed part review/part data papers are not encouraged). The size of research manuscripts is restricted to 6500 words.

Synthesis and **Modelling/Theory papers** will generally fall into the research manuscript category and the headings can be adapted accordingly (e.g. In the case of Modelling/Theory papers, include a heading of Description in place of Materials and Methods, to include description of the model or theoretical framework).

New Phytologist also publishes a number of additional formats under the Forum and Review sections. These are generally commissioned ahead of time, as is the case for this collection, but please do get in touch should you have any suggestions.

Submission deadline: 30 June 2023.

To ensure inclusion within the Special Feature **ALL papers must be submitted by the submission deadline** and any subsequent dates set for the submission of revised manuscripts following peer review. We appreciate that the extent of revisions required for different papers may vary and our publication schedule is set to accommodate this. However, whilst we will do all we can to expedite the process of those papers rejected with resubmission encouraged, out of fairness to all authors and to maintain timeliness, we cannot guarantee inclusion within the special collection. We would of course include your article in the next available regular issue once accepted. We therefore advise you to submit your manuscript ahead of the deadline if possible.

Submission procedure: to be considered for this special collection you must first [register your intention to submit a research article here](#). We will then send you a submission link, specific to you and this collection.

Please refer to the [full Author guidelines](#) before submission, which contain full information on how to compile the electronic version of your manuscript, style and legal requirements.
